SUMMARY

Final-year Computer Science student (Cyber Security specialization) and backend engineer. I design, build, and operate production systems end-to-end — REST APIs, asynchronous service architectures, containerized deployments, and the monitoring needed to keep them running. Shipped a live SaaS product with paying customers as the sole engineer.

EDUCATION

KL University, Hyderabad — B.Tech, Computer Science & Engineering (Cyber Security Specialization) **2023 – 2027**
CGPA: 9.0 / 10 | Expected Graduation: 2027

TECHNICAL SKILLS

Languages: Java (primary, OOP), Python, SQL, JavaScript

CS Fundamentals: Data Structures & Algorithms (arrays, strings, linked lists, trees, graphs, recursion, dynamic programming), Object-Oriented Design, DBMS, Operating Systems, Computer Networks

Backend & Distributed Systems: FastAPI, Flask, REST API design, service-oriented architecture, asynchronous job queues (ARQ), Redis, authentication & authorization (token/JWT), role-based access control

Frontend & Databases: React.js, Next.js, Tailwind CSS — MySQL, PostgreSQL, DynamoDB, Redis

Cloud & DevOps: Microsoft Azure (AI Services), AWS (EC2, S3, RDS, CloudFront), Docker, Git & GitHub, CI/CD, Agile/Scrum

AI Engineering: LLM & AI API integration (Azure AI, Gemini, fal.ai), prompt engineering, multi-stage generation pipelines

PROFESSIONAL EXPERIENCE

Software Engineer Intern (Backend / Full Stack) — The Kaizen Project (Learnpath Digital Pvt. Ltd.) **May 2025 – Apr 2026**
AI-powered learning platform | www.thekaizenproject.ai

- Designed, developed, and tested backend services in Python (FastAPI, Flask) for a production AI platform serving **500+ active users**, owning features end-to-end from database schema design through API implementation to production deployment.
- Built secure REST APIs with token-based authentication and role-based access control, applying object-oriented design to factor shared logic into reusable modules and testing endpoints before release.
- Operated cloud infrastructure (compute, object storage, managed SQL, CDN) with centralized logging and monitoring, improving incident detection and cutting production debugging time.
- Collaborated in an **agile** team with product and engineering stakeholders — sprint planning, code reviews, and Git branching workflows to ship iteratively.

PROJECTS

Zelavo Kids — AI Storybook SaaS Platform | www.evergift.ai **Live in Production**

React · FastAPI · PostgreSQL · Redis · ARQ · Docker · Stripe · Cloudflare R2

- Architected and shipped a **scalable, end-to-end SaaS product** with paying customers in the US and India — sole owner of system design, backend, frontend, payments, and deployment.
- Solved a core concurrency problem by designing an **asynchronous queue-based architecture** (ARQ + Redis) that offloads 60–90s AI generation jobs to background workers, keeping API response times low and the service responsive under concurrent load.
- Engineered a multi-stage AI image-generation pipeline with identity-preserving face generation, plus automated physical book fulfilment via a print-on-demand API.
- Containerized the stack with Docker, served assets via a global CDN, and managed a production PostgreSQL database with schema migrations.

ResuMatch — ATS Resume Analyzer & Career Toolkit **Personal Project**

React · Next.js · Python · Gemini AI APIs

- Built an AI-powered tool that parses a candidate's resume against a target job description and scores keyword match, ATS compatibility, and skill gaps.
- Implemented the matching logic as a scored ranking algorithm over extracted keyword sets, then generated targeted rewrite suggestions to improve role alignment.

CERTIFICATIONS & ACHIEVEMENTS

- Microsoft Certified: Azure AI Engineer Associate · AWS Certified Cloud Practitioner** · Claude Code in Action (Anthropic).
- Took **evergift.ai** from zero to a live, revenue-generating platform single-handedly — real paying customers and physical product fulfilment — while sustaining production systems for 500+ users across a 12-month engineering internship.
